1. Project Overview

MemeVerse Infinity is an innovative project built on the Alephium blockchain, combining NFT, P2E (Play-to-Earn) mechanics, and various interactive elements to provide a rich experience for players and community members. By purchasing MVT tokens, users can participate in a variety of games, activities, and community governance, as well as mint and upgrade NFTs and earn rewards through multiple channels. MemeVerse Infinity is dedicated to creating a vibrant ecosystem through its unique mechanisms and active community. In the future, the project plans to introduce more games and interactive features to continually enhance the user experience.

2. Tokenomics

MVT (MemeVerse Token) is the native token of the MemeVerse Infinity project, offering a wide range of functionalities within the ecosystem. MVT tokens are not only practically useful within the project but are also designed as a powerful meme token backed by a vibrant community. The distribution of MVT tokens is as follows:

- **Token Sale:** 30% (30,000,000 MVT) allocated for the initial sale and project launch funding.

- **Liquidity Pool:** 20% (20,000,000 MVT) allocated to support liquidity on decentralized exchanges.
- **Rewards:** 20% (20,000,000 MVT) allocated to incentivize users, community contributors, and support staking pools.
- **Team Tokens:** 15% (15,000,000 MVT) allocated for team rewards with a 2-year linear vesting schedule.
- **Marketing & Partnerships:** 10% (10,000,000 MVT) allocated for marketing efforts and strategic partnerships.
- **Treasury:** 5% (5,000,000 MVT) allocated for long-term project development and reserve funds.

3. GameSystem

GameSystem is the core entertainment module within the MemeVerse Infinity ecosystem, offering multiple game modes for players to choose from, enriching their interaction and gameplay experience.

FomoGame

FomoGame is one of the most attractive games within MemeVerse Infinity, inspired by the once-popular Fomo3D. Fomo3D once attracted a prize pool of over 21,000 ETH, making it a landmark event in blockchain defi history.

FomoGame inherits the core mechanics of Fomo3D with added innovations. Players can purchase Keys to participate in the prize pool distribution. When the countdown reaches zero, the last player to purchase a Key wins the game and receives the majority of the prize pool. MVT token holders also receive additional in-game incentives, where a portion of ALPH is dynamically distributed to MVT holders each time a player buys a Key, rewarding them for their contribution to the game ecosystem.

This ALPH distribution mechanism is designed to encourage users to hold and participate in the game through in-game activities, with rewards based on gameplay interaction rather than fixed returns.

More Games

GuessPrice

GuessPrice is a prediction game based on cryptocurrency market trends. Players can predict whether the price of a specific cryptocurrency (e.g., Bitcoin, Ethereum) will rise or fall. Players who make correct predictions will be rewarded accordingly.

Battle Games

In the future, MemeVerse Infinity plans to launch NFT Games, where players can engage in battles using their NFTs to earn rewards. This feature will further enhance the utility of MVT and increase the competitiveness of the games.

4. MemeFun Features

MemeFun is a core feature of the MemeVerse Infinity ecosystem. It is a fair launch platform similar to PumpFun, providing users with the opportunity to create and promote meme tokens. Users only need 2,000 MVT (equivalent to 1 ALPH) to launch on MemeFun. Meme token creators must add liquidity, with a minimum requirement of 1 ALPH.

MemeFun Highlights

- 1. Create Meme Tokens:** Creating meme tokens is simple and cost-effective. Users can create a token with just a few clicks and 2,000 MVT, equivalent to 1 ALPH. Once created, these tokens can be traded in an AMM-style market, even without initial liquidity. As the meme token price rises, it will automatically list on AYIN, further boosting trading volume and visibility.

2. **Liquidity Pool Security:** To ensure the safety and growth of each project, MemeFun permanently locks all liquidity pool (LP) tokens, providing additional security for all participants. When creating a meme token, creators must choose to add liquidity, with a minimum requirement of 1 ALPH.
3. **Airdrop Rewards:** MVT holders will automatically receive 3% of the project tokens as an airdrop, distributed according to the MVT staking ratio. The team will receive 1% of the tokens to support project development. This design is similar to BNB's liquidity mining and is intended to incentivize long-term participation.
4. **Creator Reward:** Token creators can receive 5% of the total supply as a reward, incentivizing the creation and promotion of meme tokens.

5. MemeBot Features

MemeBot is a practical tool within the MemeVerse Infinity ecosystem, designed for players and users to enhance their FomoGame experience and streamline meme token and Alephium-based token trading. MemeBot has the following core features:

- 1. FomoGame Assistant:** MemeBot helps players easily participate in FomoGame by purchasing Keys, monitoring countdowns, and calculating reward earnings. With MemeBot, players can manage their game progress more effectively and enhance their gaming experience.
- 2. Token Trading Assistant:** MemeBot supports the buying and selling of Alephium-based tokens. Users can quickly execute trades through MemeBot, helping them seize market opportunities and optimize their investment strategies.

6. MVT Staking and ALPH Rewards Mechanism

Staking MVT for Key Discounts

Players who stake MVT tokens can enjoy discounts when purchasing Keys in FomoGame. This mechanism encourages players to hold and stake MVT, increasing its utility and player participation.

MVT Stakers Earn Dynamic Rewards

In FomoGame, players who stake MVT can also earn ALPH rewards based on in-game activity. The reward mechanism dynamically distributes ALPH to MVT stakers based on in-game

interactions, enhancing engagement and increasing the long-term value of staking.

MVT Stakers Earn Additional MemeFun Token Rewards

Players who stake MVT tokens not only earn rewards in FomoGame but also receive additional rewards in MemeFun. Each time a project successfully launches on the MemeFun platform, a portion of the tokens is distributed to MVT stakers proportionally, rewarding them for supporting the project and holding tokens.

7. Community Governance and Future Outlook

MemeVerse Infinity is a community-driven project. Community members can participate in project governance by holding MVT tokens, including voting on future project features, upgrades, and improvements. As the project evolves, community members will continue to play a crucial role in shaping the platform and driving the project toward a broader future.
