MemeVerse Infinity Whitepaper

Table of Contents

Project Overview

MemeVerse Infinity is an innovative project built on the Alephium blockchain, combining NFTs, Play-to-Earn (P2E) mechanics, and various interactive elements to provide a rich experience for players and community members. By purchasing MVT tokens, users can participate in a variety of games, activities, and community governance, mint and upgrade NFTs, and earn rewards through multiple channels. MemeVerse Infinity is dedicated to creating a vibrant ecosystem through its unique mechanisms and active community. In the future, the project plans to introduce more games and interactive features to continually enhance the user experience.

MemeVerse Infinity User Engagement Cycle
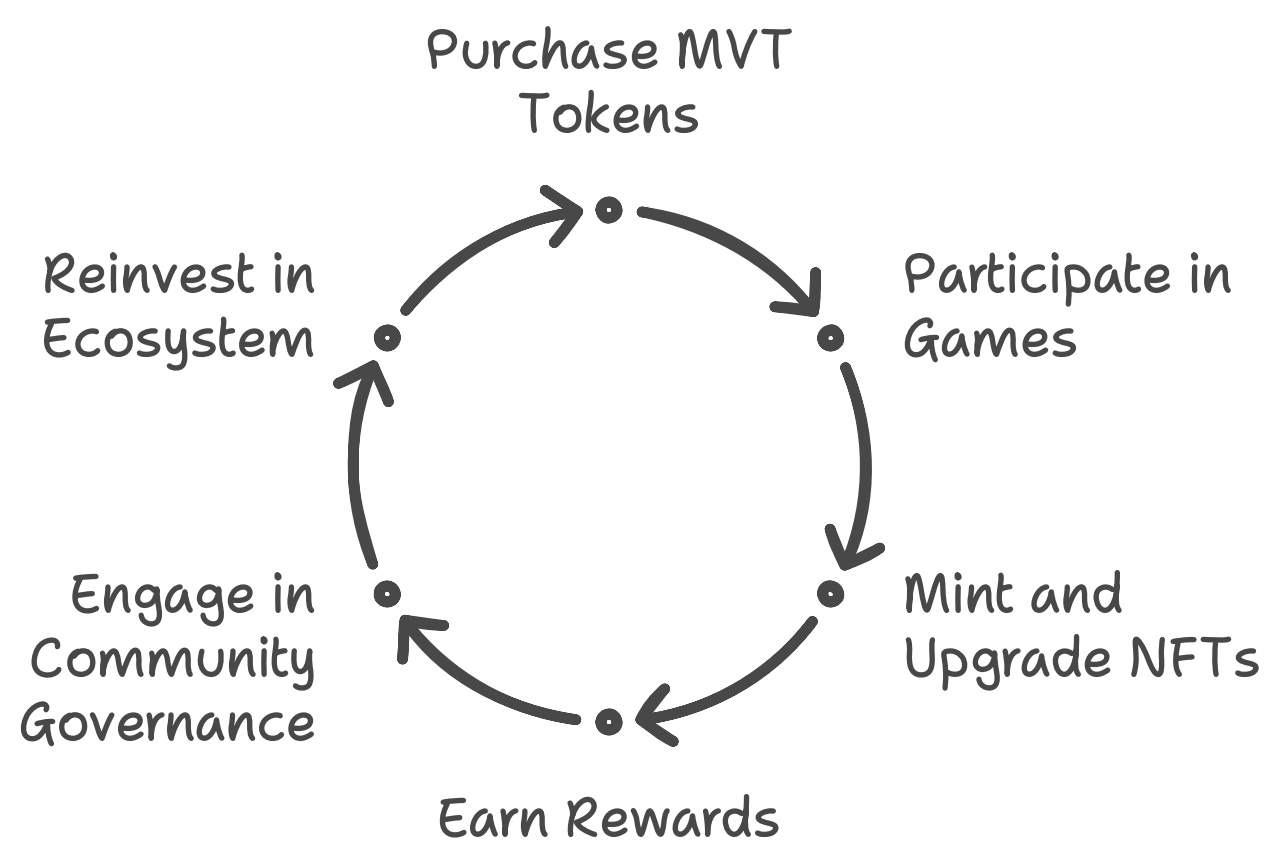

Tokenomics

MVT (MemeVerse Token) is the native token of the MemeVerse Infinity project, offering a wide range of functionalities within the ecosystem. MVT tokens are not only practically useful within the project but are also designed as a powerful meme token backed by a vibrant community. The distribution of MVT tokens is as follows:

• Token Sale: 30% (30,000,000 MVT) allocated for the initial sale and project launch funding.
• Liquidity Pool: 20% (20,000,000 MVT) allocated to support liquidity on decentralized exchanges.
• Rewards: 20% (20,000,000 MVT) allocated to incentivize users, community contributors, and support staking pools.
• Team Tokens: 15% (15,000,000 MVT) allocated for team rewards with a 2-year linear vesting schedule.
• Marketing & Partnerships: 10% (10,000,000 MVT) allocated for marketing efforts and strategic partnerships.

MVT Token Distribution
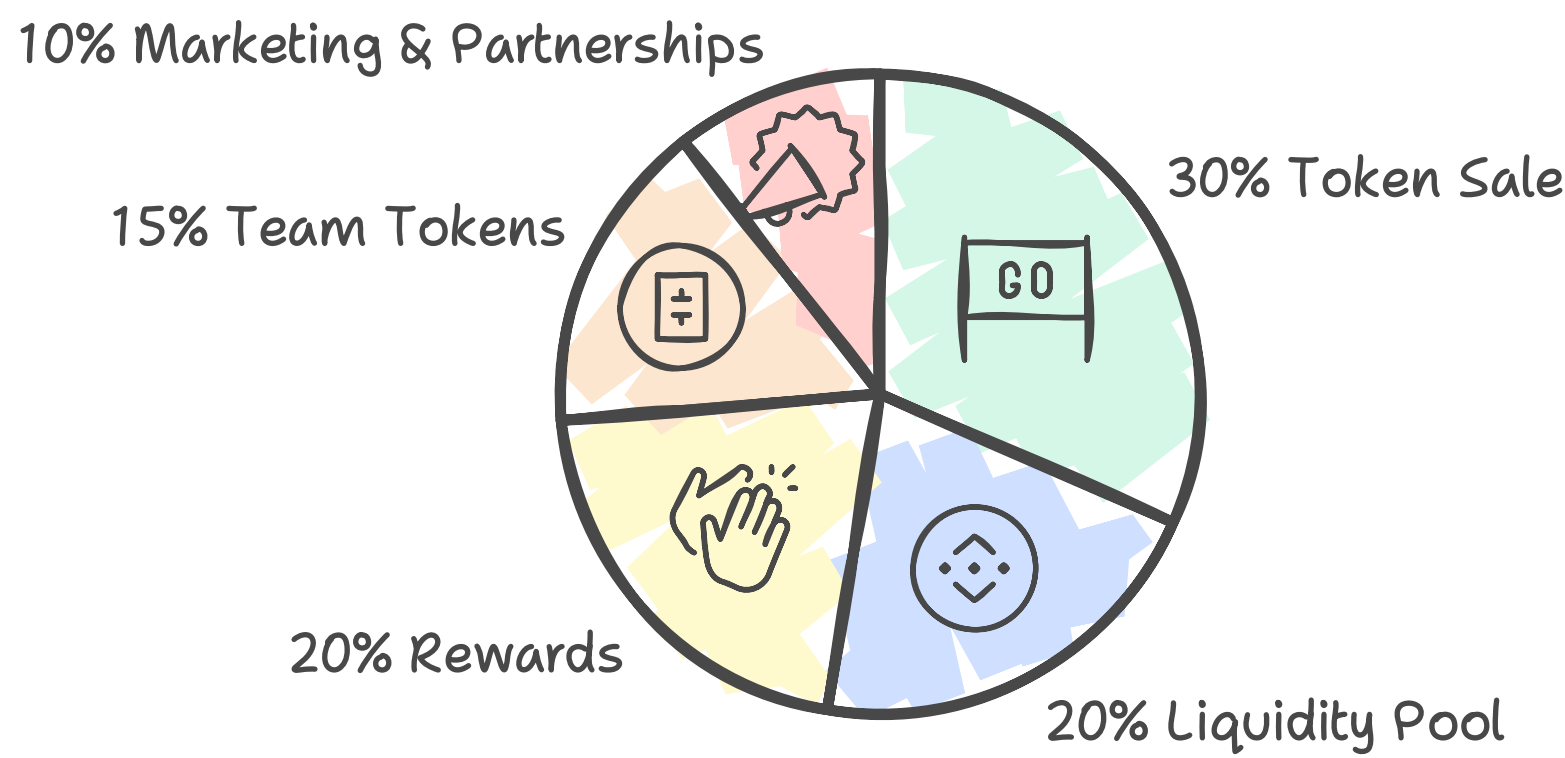

Core Mechanisms

FomoGame Prize Pool Mechanism

In MemeVerse Infinity's FomoGame, the prize pool mechanism is a core part of the economic system. The mechanism operates as follows:

• Prize Pool Accumulation: Each time a player uses ALPH to purchase a Key in FomoGame, a portion of the purchase amount automatically goes into the prize pool. As more players participate, the amount of ALPH in the prize pool continues to grow.

Real-Time Dividend Mechanism

In FomoGame, each time a player purchases a Key, the prize pool is distributed as follows:

• 50% is awarded to the last player who purchases a Key and wins FomoGame.
• 30% is distributed in real-time to Key holders based on their current Key holdings as dividends.
• 10% is distributed in real-time to MVT holders based on their MVT holdings.

• 10% is rolled over into the prize pool for the next round of FomoGame.

Prize Pool Distribution in FomoGame

| 50%	30%	10%	10%
Last Player Winner	Key Holders Dividends	MVT Holders	Rolled Over
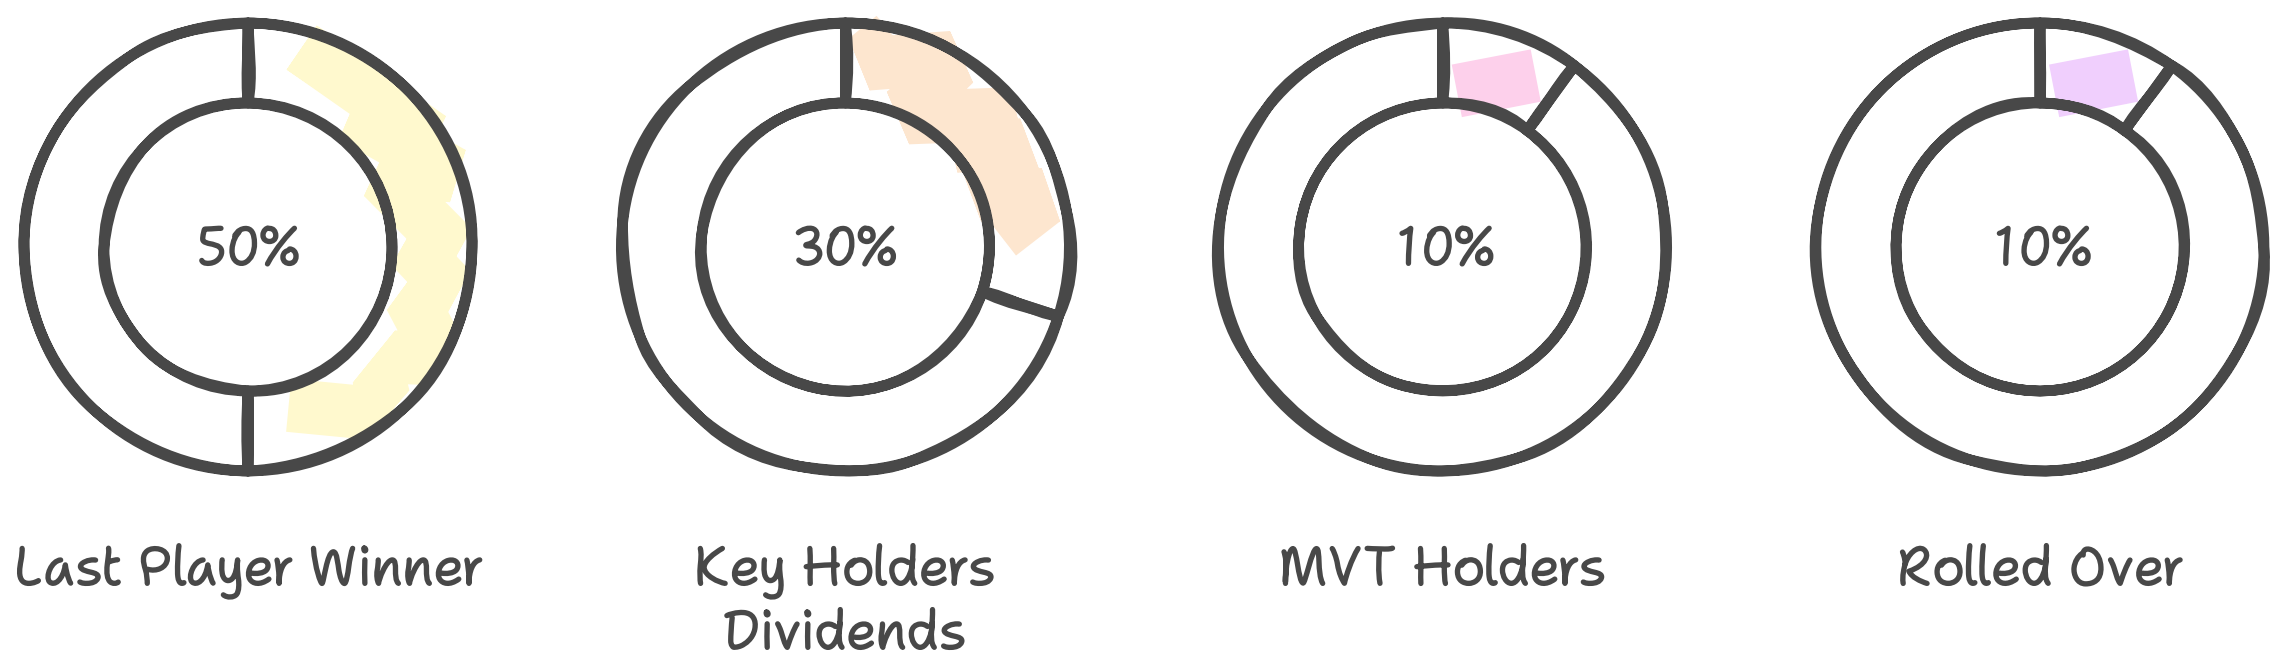

Fast and Long Game Modes

FomoGame offers two different game modes to meet the needs of different players:

1. Fast Mode: The game starts with a 10-minute window for players to buy Keys. After this period, a 10-minute countdown begins. Each Key purchase extends the countdown by 30 seconds, and the last player to purchase a Key wins.
2. Long Game Mode: The game starts with a 12-hour countdown. After this period, another 12-hour countdown begins. Each Key purchase extends the countdown, and the last player to purchase a Key wins.

Which game mode should you choose?

Fast Mode

Quick, intense gameplay with a shorter duration.

VS

Long Game Mode

Slower, more strategic gameplay with a longer duration.

Countdown Mechanism

The countdown mechanism in FomoGame varies based on the selected mode. In Fast Mode, players have 10 minutes to purchase Keys initially, followed by a 10-minute countdown where each Key purchase extends the timer by 30 seconds. In Long Game Mode, the game starts with a 12-hour countdown, and after this period, another 12-hour countdown begins, with the last player to purchase a Key winning the game.

Which game mode to choose in FomoGame?

Fast Mode

Shorter initial countdown, but can be extended with Key purchases.

Long Game Mode

Longer initial countdown, with a second countdown after, last player to purchase a Key wins.
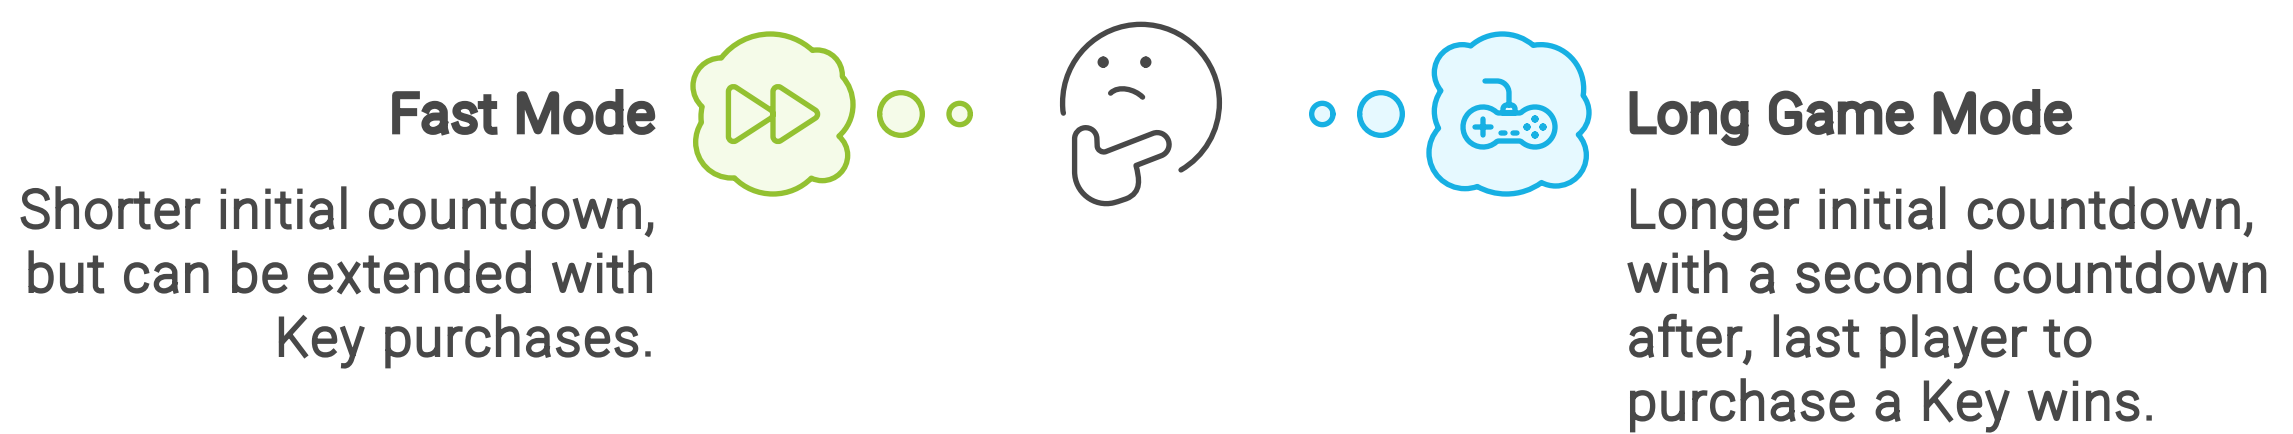

MemeFun Features

MemeFun is a core feature of the MemeVerse Infinity ecosystem. It is a fair launch platform similar to PumpFun, providing users with the opportunity to create and promote meme coins.

MemeFun Highlights

1. Create Meme Coins: Creating meme coins is simple and cost-effective, requiring just a few clicks and 1 ALPH to start. Once created, these coins can be traded in an AMM-style market, even without initial liquidity. As the meme coin price rises, it will automatically list on AYIN, further boosting trading volume and visibility.
2. Liquidity Pool Security: To ensure the safety and growth of each project, MemeFun permanently locks all liquidity pool (LP) tokens, providing additional security for all participants.
3. Airdrop Rewards: MVT holders will automatically receive a 5% airdrop of project tokens, designed similarly to BNB's liquidity mining, incentivizing long-term participation.

MemeBot Features

MemeBot is a practical tool within the MemeVerse Infinity ecosystem, designed for players and users to enhance their FomoGame experience and streamline meme coin and Alephium-based token trading. MemeBot has the following core features:

1. FomoGame Assistant: MemeBot helps players easily participate in FomoGame by purchasing Keys, monitoring countdowns, and calculating dividend earnings. With MemeBot, players can manage their game progress more effectively and enhance their gaming experience.
2. Token Trading Assistant: MemeBot supports the buying and selling of Alephium-based tokens. Users can quickly execute trades through MemeBot, helping them seize market opportunities and optimize their investment strategies.

MVT Staking and ALPH Rewards Mechanism

Staking MVT for Key Discounts: Players who stake a certain amount of MVT are eligible to purchase Keys in FomoGame at a discounted price. The more MVT staked, the greater the discount. This mechanism encourages players to hold and stake MVT, increasing its utility.

MVT Stakers Earn ALPH Rewards: Only players who stake MVT are eligible to earn ALPH rewards. By staking MVT, players can unlock the ALPH staking rewards available to MVT holders. This mechanism enhances the value of MVT within the ecosystem and increases the incentive for players to stake, making long-term holding of MVT more attractive.

AI NFT Generator

MemeVerse Infinity will introduce an AI-driven NFT generator, allowing users to easily create unique NFTs. This generator leverages advanced artificial intelligence technology, enabling users to generate highly creative and personalized digital artworks through simple inputs or parameter settings. This not only enriches the MemeVerse Infinity ecosystem but also provides users with more opportunities to create and trade NFTs.

More Games and Features

In addition to the games and features already released, MemeVerse Infinity plans to introduce more games and interactive features in the future. These new additions will further enrich the user experience, increase the diversity of the ecosystem, and make MemeVerse Infinity a more comprehensive and engaging platform.

Community Governance and Future Outlook

MemeVerse Infinity is a community-driven project where community members can participate in governance by holding MVT tokens, including voting on future project features, upgrades, and improvements. As the project evolves, community members will continue to play a crucial role in shaping the platform, driving the project toward a broader future.
